

What's new in EverBatt 2023?

Major expansions and updates in EverBatt 2023 include

- 1) Split battery recycling into preprocessing (to produce black mass from various feedstock) and critical materials recovery (from black mass and/or other feedstock);
- 2) Enabled recycling of a single or mixed feedstock that could consist of end-of-life batteries (pack/module/cell), manufacturing scrap (rejected cell/electrode scrap), and/or black mass;
- 3) Adopted a state-of-the-art cost estimating method for recycling plants based on *Towler and Sinnott 2021*;
- 4) updated process information for pyrometallurgical, hydrometallurgical, and direct recycling technologies;
- 5) updated background data based on BatPaC 5.0 2022-07-22, GREET 2022, and most recent prices for materials, utilities, labor, etc.

Minor updates and changes in EverBatt 2023 include

- 1) Improved model interface/layout to make it easier to use;
- 2) Fixed identified bugs and errors.
